LATEX Experiments

AeAeA

January 25, 2020

1 TeX distributions

1.1 MacTeX

The best for Mac.

\$ brew cask install mactex

1.2 Visual Studio Code LaTeX Workshop Extension

LaTeX Workshop is an extension for Visual Studio Code, aiming to provide core features for LaTeX typesetting with Visual Studio Code.

- https://github.com/James-Yu/LaTeX-Workshop
- https://github.com/James-Yu/LaTeX-Workshop/wiki/Compile

Build LaTeX file by calling the command Build LaTeX project from the Command Palette or from the TeX badge. This command is bound to Cmd+Ctrl+b

```
You can change VS Code settings by opening Settings tab:

Cmd+, -> Extensions -> LaTeX

or, alternatively, by directly editing settings.json file:

"/Library/Application\ Support/Code/User/settings.json

Recommended settings for LaTeX Workshop:

{

"latex-workshop.view.pdf.viewer": "tab",

"latex-workshop.latex.outDir": "%DIR%/texout",

"latex-workshop.latex.autoBuild.run": "never",

"latex-workshop.latex.autoClean.run": "onBuilt"
```

1.3 MiKTeX

Not for Mac. Old MiKTeX installation:

/usr/local/bin/

/Applications/MiKTeX\ Console.app/

1.4 TinyTeX

TinyTeX - a lightweight, cross-platform, portable, and easy-to-maintain LATEX distribution based on TeX Live.

Currently TinyTeX works best for R users. Installing and maintaining TinyTeX is easy for R users, since the R package tinytex has provided wrapper functions.

For other (non-R) users:

- TinyTeX docs: https://yihui.org/tinytex/
- In the directory
 - ~/Library/TinyTeX/texmf-dist/tex/latex/ you can find all LATEX packages installed for TinyTeX.
- If you compile a LaTeX document and run into an error message like this:
 - ! LaTeX Error: File 'times.sty' not found.

It basically indicates a missing LaTeX package.

Use the command tlmgr search to find the name of the missing package: \$ tlmgr search --global --file "/times.sty"

psnfss: texmf-dist/tex/latex/psnfss/times.sty

In this case, the missing package is psnfss, and we can install a package via tlmgr install, e.g.,

\$ tlmgr install psnfss

If you still see error messages that you don't understand, you may need to update everything:

- \$ tlmgr update --self --all
- \$ tlmgr path add
- \$ fmtutil-sys --all
- To uninstall TinyTeX use command line:
 - \$ tlmgr path remove
 - \$ rm -r "~/Library/TinyTeX"

2 Epigraph

In doing what we ought we deserve no praise, because it is our duty.

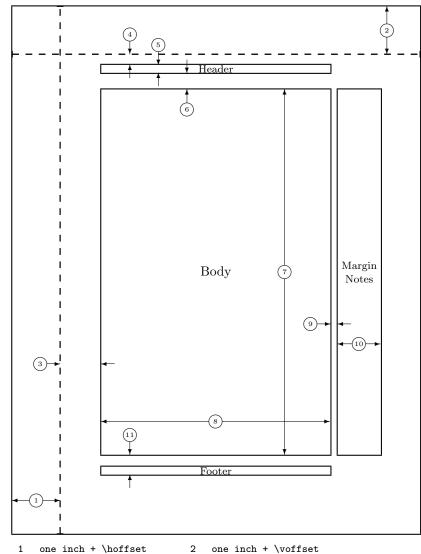

— Saint Augustine

2.1 Online docs

- https://en.wikibooks.org/wiki/LaTeX IATEX wiki (very informative).
- http://texdoc.net/ TeXdoc is a TeXand IATeXdocumentation lookup system.

| 2.2 Units and page layout | |
|---|--|
| • https://en.wikibooks.org/wiki/LaTeX/Page_Layout | |
| Standard LaTeXunits: mm, cm, pt, in, with $1in = 72.27pt$ and $1pt = 0.3515mm$ and $1mm = 2.8445pt$. US Letter (letterpaper) is 8.5×11 in, 215.9×279.4 mm, 614.295×794.97 pt, aspect ratio 1.294 . A4 (a4paper) is 8.3×11.7 in, 210×297 mm, 597.44×844.95 pt, aspect ratio | |
| $1.414 \ (\approx \sqrt{2}).$ | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

The current page layout picture below is generated by calling command \layout* from \usepackage{layout}.1

- $\odsidemargin = 62pt$ 3
- \headheight = 12pt
- \textheight = 550pt 7
- 9 \marginparsep = 11pt
- 11 \neq 30pt \hoffset = Opt \paperwidth = 614pt
- one inch + \voffset
- \topmargin = 16pt
- \headsep = 25pt
- \textwidth = 345pt 8
- \marginparwidth = 65pt \marginparpush = 5pt (not shown) 10

\voffset = Opt \paperheight = 794pt

¹An example footnote.

Margin note 1 in = 72.27 pt1pt=0.35mm1 mm = 2.84 pt

textwidth 345pt = 4.77in= 121.48 mm

textheight 550pt = 7.61in= 193.66mm

3 verbatim and listings

3.1 verbatim

```
Text enclosed inside

\begin{verbatim} \ldots \end \{\text{verbatim}\}
environment is printed directly
and all \LaTeX{\} commands are ignored.

Text_enclosed_inside_\begin{verbatim*}_environment

```

3.2 listings: Source code printing

- listings package documentation
- https://www.overleaf.com/learn/latex/Code_listing

3.2.1 minimal setup

Example of using the \begin{lstlisting}[language=Python] environment from the \usepackage{listings} package to highlight Python code:

```
import numpy as np
def incmatrix (genl1, genl2):
   m = len(genl1)
    n = len(genl2)
   M = None \#to become the incidence matrix
   VT = np.zeros((n*m,1), int) #dummy variable
    \#compute\ the\ bitwise\ xor\ matrix
    M1 = bitxormatrix (genl1)
   M2 = np.triu(bitxormatrix(genl2),1)
    for i in range (m-1):
        for j in range (i+1, m):
            [r,c] = np. where (M2 = M1[i,j])
            for k in range(len(r)):
                VT[(i)*n + r[k]] = 1;
                VT[(i)*n + c[k]] = 1;
                VT[(j)*n + r[k]] = 1;
```

VT[(i)*n + c[k]] = 1;

3.2.2 with code styles and colours

You need \usepackage{xcolor} package for the code colouring.
Just like in floats (tables and figures), captions can be added to a listing for a more clear presentation. This caption can be later used in the list of Listings \lstlistoflistings.

```
import numpy as np
  def incmatrix(genl1,genl2):
3
      m = len(genl1)
      n = len(gen12)
      M = None #to become the incidence matrix
      VT = np.zeros((n*m,1), int) #dummy variable
      s = "codepurple"
9
10
11
      #compute the bitwise xor matrix
      M1 = bitxormatrix(genl1)
13
      M2 = np.triu(bitxormatrix(genl2),1)
14
      for i in range(m-1):
16
           for j in range(i+1, m):
               [r,c] = np.where(M2 == M1[i,j])
17
               for k in range(len(r)):
18
                   VT[(i)*n + r[k]] = 1;
19
                   VT[(i)*n + c[k]] = 1;
20
                   VT[(j)*n + r[k]] = 1;
21
                   VT[(j)*n + c[k]] = 1;
23
                   if M is None:
24
                       M = np.copy(VT)
25
                   else:
26
27
                        M = np.concatenate((M, VT), 1)
28
                   VT = np.zeros((n*m,1), int)
29
31
      return M
```
